Subject: Analysis and Mathematical Physics

First announcement AMP 2024

Analysis and Mathematical Physics <https://www.iimas.unam.mx/amp2024/>

Analysis and Mathematical Physics is an online conference aiming to bring together leading experts and young researchers from all over the world who work or are interested in mathematical problems within the context of mathematical physics. AMP conference's purpose is also to facilitate the exchange of ideas and help develop existing and future scientific collaborations. There will be several lectures on the topics; there will be no charge to speakers or participants, but registration is required.

AMP conference will be an online event from August 5th to 17th, 2024, on a ZOOM webinar broadcast live on Facebook and YouTube IIMAS' institutional channels.

Scope

The conference will concentrate on the following topics in mathematical analysis within the context of mathematical physics:

Direct and inverse spectral and scattering theory for differential and difference equations and for systems of such equations

Differential operators on spatial networks

Differential operators on closed sets

Inverse problems for nonlocal operators

Orthogonal polynomials, Jacobi and CMV matrices

Quantum graphs

Applications of spectral and scattering theory to quantum mechanics and plasma physics

Invited Speakers

* to be confirmed.

Subject: Postdoc position open in analysis for inverse problems at Department of Mathematics, Aarhus University

Dear all

Postdoc position open in analysis for inverse problems at Department of Mathematics, Aarhus University, Denmark (a top 100 university).

Duration: 3 years

Start date: September 1st, 2024 (or soon after)

Inverse problems and functional calculus of Neumann-to-Dirichlet maps

The project is on reconstruction in Calderón's inverse conductivity problem, with a specific focus on complex-valued coefficients and local boundary data. That is, based on a local Neumann-to-Dirichlet (ND) map on a subset of the domain boundary, to construct a coefficient for the PDE in the domain interior. The combination of complex coefficients and local data implies an open problem of high interest. The project will investigate transformations of such ND maps, and their properties, with the aim of satisfying certain nonlinearity estimates required for iterative methods to converge.

The work may also include short visits to Michael Vogelius of Rutgers U./Aarhus U., who will be one of the collaborators on the project.

For details on applying (must be done through the online system), salary, and additional details, see:

<https://math.au.dk/en/about/vacancies/job/postdoctoral-positions-in-mathematics-1>

Deadline for applying is **April 5th (Danish time)**.

The department is located on the main campus of Aarhus University and at walking distance to the city center of Aarhus, the second largest city of Denmark, located on the Jutland peninsula. The department has a flat hierarchy, friendly colleagues, and strong research environments. For more on the department, see the website: <https://math.au.dk/en/>

Best regards
Henrik Garde

Subject: PhD Position in Optimization, Optimal Transport and Inverse Problems, University of Twente

We are looking for a talented, research-oriented PhD candidate to join the project "Curve Ensemble Gradient Descents for Sparse Dynamic Problems" at University of Twente. We offer a full-time position for four years in an active and stimulating research environment, bridging applied and pure mathematics.

The PhD candidate will work under the supervision of Dr. Marcello Carioni and will be part of the group Mathematics of Imaging and Artificial Intelligence (MIA) at the department of Applied Mathematics.

For more information about the position and the application procedure, you are welcome to visit

<https://utwentecareers.nl/en/vacancies/1664/phd-position-in-optimization-optimal-transport-and-inverse-problems/>

and contact Dr. Marcello Carioni (m.c.carioni@utwente.nl).

Deadline: 5 April 2024.

Subject: Full Professor of Optimization (all genders welcome), Univ. Klagenfurt

The University of Klagenfurt invites applications for a position as a Full Professor of Optimization (all genders welcome) at the Department of Mathematics.

This is a full-time position, available from 1 October 2024. Whether the position will be implemented in compliance with the provisions of Art. 98 (permanent) or Art. 99 of the Austrian Universities Act (limited to 5 years) will be decided in the course of the appointment procedure.

The professorship will be embedded within the new Area of Research Excellence "Multiple Perspectives in Optimization (MPOpt)" with its well-established Doctoral Programme in Mathematics at the Department of Mathematics and within the Faculty of Technical Sciences (<https://www.aau.at/en/tewi/>). The department provides a vivid, friendly, and research-oriented environment.

Details can be found at <https://jobs.aau.at/en/job/full-professor-of-optimization-all-genders-welcome/>

Application deadline: 17 April 2024

From: Tapio Helin, Tapio.Helin@lut.fi

Sent: Friday, 8 March, 2024

Subject: Assistant/associate/full professor (tenure track) of applied mathematics

LUT School of Engineering Sciences is looking for a professor of applied mathematics.

The professorship is located at the Department of Computational Engineering. The department concentrates on applied mathematics, computer vision and pattern recognition, computational spectroscopy, and atmospheric modelling. We have a globally unique cluster of expertise in uncertainty quantification and inverse problems. The department hosts the Research Council of Finland's Centre of

Excellence for Inverse Modelling and Imaging and the Flagship of Advanced Mathematics for Sensing, Imaging and Modelling (FAME).

The position is at the assistant/associate/full professor levels of the tenure track and will be filled through an open call for a fixed term of four years (assistant/associate professor) or permanently (full professor). The tenure track system offers researchers a possibility to advance to the next level, provided they meet the requirements in the promotion reviews.

The position is based in Lappeenranta, Finland and starts with a six-month trial period.

The candidates are expected to strengthen the research and activities in mathematical modelling related to the FAME. In addition, the candidate must be able to successfully build a dedicated independent research group alongside existing research lines, reinforcing the specialisation of the department in computational sciences. Candidates must have a strong research record in the field of applied mathematics. We expect evidence of both independent methodological development and numerical applications of methods.

Candidates are required to have a doctorate, high-level scientific qualifications, experience in heading scientific research, the ability to acquire funding, the ability to provide high-level instruction based on research, the ability to supervise final theses, proof of international cooperation in their field of research, and when relevant to the duties of the position, practical experience in the field of the professorship. Candidates must also have research and teaching merits, proof of effective research and the acquisition of external research funding, and international experience.

We value experience of successful project work and research collaboration. Evidence of activity in interdisciplinary and international collaboration will be considered an asset. In this position, spoken and written fluency in English is required.

The duties of the professorship includes bachelor's, master's and doctoral education in key areas of computational engineering. In line with the research strategy of the LUT School of Engineering Sciences, advanced teaching will focus on method development involving clean energy production, the circular economy, and spin-off business creation.

The duties of the professor will also include the following research-related tasks:

- design and delivery of bachelor's, master's and doctoral education
- supervision of theses and doctoral studies
- preparation of national and international research and education projects
- research with an international impact
- knowledge enhancement for the benefit of industry and the economy
- participating as an expert in the preparation of projects at other LUT units
- administrative tasks related to the activities of the university.

The appointment process description explains the qualification requirements and tenure track appointment criteria.

All application documents must be in English and in PDF format. The application must include:

- a curriculum vitae (max. 10 pages)
- a copy of the candidate's doctoral diploma
- a full list of publications including the candidate's Scopus and Google Scholar details: the Scopus ID and Google Scholar profile URL, the total number of publications, and total number of citations and h-indices
- a separate list of the 10 publications selected for expert evaluation

- the 10 publications mentioned above
- [a teaching portfolio](#) or an equivalent account of the candidate's teaching qualifications
- an account of the candidate's merits and activities of significance to the vacancy (max. 3 pages)
- an account of the candidate's vision on the development of education, research, and projects in the field of the professorship at LUT University (max. 3 pages).

Please specify the tenure track level applied to.

The salary is determined according to the salary system for university teaching and research personnel. The pay will include an individual pay component based on performance and competence. The annual gross salary for an assistant/associate professor amounts to 49 300 – 66 300 euros and full professor to 69 000 – 102 200 euros depending on the qualifications and experience of the candidate. In addition to a competitive salary, the wide range of benefits that come with this job include a holiday bonus, a generous holiday entitlement, research incentive scheme with personal rewards for high quality publications, flexible working hours, occupational health care, a collegial faculty environment and continued commitment for your support, learning, training and development.

The closing date for applications is 2 April at 15:00, Finnish local time (UTC + 3h). Please submit your application and all required attachments by filling out the online form.

For further information, please contact Lassi Roininen, professor of applied mathematics, +358 40 675 4885, lassi.roininen@lut.fi.

Subject: University assistant with doctorate, Graz, Austria

At the University of Graz, researchers and students work across a broad disciplinary spectrum to enlarge our knowledge, and find strategies to deal with challenges our society is confronted with and to shape tomorrow's world. The University of Graz is a place which combines high quality academic research and teaching, where achievement is rewarded, careers are promoted, and social diversity is encouraged – all within a modern, award-winning working environment. Our motto: We work for tomorrow. Join us!

The Institute of Mathematics and Scientific Computing is looking for a University assistant with doctorate (m/f/d)

<https://jobs.uni-graz.at/en/jobs/133a4fcc-96f2-7db2-af05-65ef096097a1>

40 hours a week fixed-term employment for 6 years; position to be filled as of now

Application deadline: 17.04.2024

Salary Category: B1 mit Doktorat; *Salary per Year (Full Time):* € 66,532.20

Inverse Problems and Mathematical Image Processing is one of the research areas at the Institute of Mathematics and Scientific Computing, which is represented in Graz by a dedicated team of international scientists. The associated research group covers a broad spectrum of current applications with a special focus on interdisciplinarity. It offers a friendly working environment, space for creativity and independent work, an appreciative attitude and family friendliness.

Your Responsibilities

- Research in the field of applied mathematics with emphasis on the analysis and the numerics of problems in mathematical imaging, inverse problems and data sciences
- Collaboration in interdisciplinary cooperation projects and third-party funded projects
- Independent teaching of courses in the field of applied mathematics, supervision of students and holding of examinations
- Participation in organizational and administrative matters

Your Profile

- Doctoral degree in a mathematical branch of study
- Solid knowledge of one of the following fields: mathematical methods, analysis and numerics in imaging, inverse problems or data sciences
- Ability for integration into the department's research profile and in particular into interdisciplinary cooperation projects
- Capacity for teamwork, organizational talent and ability to communicate
- Very good command of english
- Ability to teach in German (after a transition period of 2 years)

For further information or questions, please contact:

Univ.-Prof. Dipl.-Math. Dr. Kristian Bredies

kristian.bredies@uni-graz.at

[03163805170](tel:03163805170)

Please note that in order to comply with the applicable data protection regulations, we can only accept applications via our web-based applicant tool for this vacant position.

MaLGa Summer Schools 2024 - DLCV, MLCC, AHAML

As part of the scientific activity and educational offer of [MaLGa - Machine Learning Genoa Center](#), we are glad to announce that applications are open for the following PhD courses:

DLCV - Deep Learning and Computer Vision 2024, two crash courses, one school ([course web page here](#)), to be held **10-14 June 2024**

Instructors: Francesca Odone, Nicoletta Noceti

The third edition of the DLCV (Deep Learning and Computer Vision) School provides a hands-on introduction to basic principles of deep learning, computer vision, and their strong interconnection.

[Apply here](#) by April 1st 2024

MLCC - Machine Learning Crash Course 2024 ([course web page here](#)) to be held **25-28 June 2024**

Instructors: Lorenzo Rosasco, Silvia Villa, Simone Di Marino, Matteo Santacesaria

MLCC (Machine Learning Crash Course) was held for the first time in 2014 and has evolved in different formats since then. It provides an introduction to the fundamental methods at the core of modern Machine Learning, covering theoretical foundations as well as essential algorithms.

[Apply here](#) by April 1st 2024

AHAML - Applied Harmonic Analysis and Machine Learning 2024 ([course web page here](#)) to be held **2-6 September 2024**

Instructors: Irène Waldspurger, Alberto Setti, Davide Bianchi, Karlheinz Gröchenig

The school consists of three courses on applied harmonic analysis and machine learning.

[Register here](#) by July 31st 2024

Our schools are open to students, researchers and professionals. The maximum number of participants for each school is 120.

Subject: Core Imaging Library Training Course, Online, April 2024

Core Imaging Library Training Course, Online, April 2024

Dear all,

The team behind the Core Imaging Library (CIL) will be running an online training course on Monday 29th and Tuesday 30th April 2024. The course will introduce computed tomography, CIL and reconstruction using filtered back projection and optimization-based iterative methods.

More details and registration at <https://ccpi.ac.uk/events/cil-online-training-april24/>

The training will take place over two afternoons:

On Monday 29th April 1-5pm BST: getting started with CIL

- introduction to computed tomography and CIL
- how to use CIL readers to load different types of data
- guide to common pre-processing steps in CIL
- using filtered back projection for reconstruction

On Tuesday 30th April 1-5pm BST: advanced reconstruction with CIL

- introduction to optimization-based iterative reconstruction
- dealing with low-quality or incomplete data

Training will be delivered remotely, and material will be provided through the STFC cloud which you will access through a browser.

Follow up sessions will be available after the training course to provide specific help on installation of CIL on your own machines, downloading data from the Cloud and using CIL on your own data.

Limited places available, so please fill the registration form as soon as possible, and we will contact you with a confirmation.

Best wishes,

Jakob Sauer Jørgensen (DTU)

Subject: SSVM 2025 - 1st announcement & call for papers

Dear colleagues,

We warmly invite you to participate to the 10th International Conference on Scale Space and Variational Methods in Computer Vision (SSVM) which will be held at [Dartington Hall](#), Totnes, Devon, UK in the period **May 18-22 2025.**

Do not hesitate to forward this announcement to any of your colleagues and students who may be interested to participate.

Call for papers

We kindly invite you to submit your contribution. Submitted contributions should be maximum 12 page long and formatted according to the LNCS Springer standards. Papers accepted for the conference will appear in the conference proceedings that will be published in Springer's Lecture Notes in Computer Science series.

Prospective authors are invited to submit their contribution electronically via the SSVM'25 Paper Submission Web Page (more details will be announced in due course). All papers will undergo a double-blind peer-review procedure.

Accepted papers will be presented at the conference either in the format of posters or talks.

Important dates

* Paper submission: **November 30, 2024**

* Notification of acceptance: **January 27, 2025**

* Camera-ready paper deadline: **February 17, 2025**

* Conference dates: **May 18 - May 22, 2025**

Best student paper award

The conference will award a best student paper prize.

!! Conference website !!

Please check regularly our conference website for updates on the conference details.

<https://sites.google.com/view/ssvm-2025/home-page>

We look forward to receive your contribution and we hope to see many of you at Dartington Hall next year!

The SSVM25 Organizing Committee,

Tatiana Bubba (University of Bath)
Romina Gaburro (University of Limerick)
Silvia Gazzola (University of Bath)
Kostas Papafitsoros (QMUL)
Marcelo Pereyra (Heriot-Watt University)
Carola Schönlieb (University of Cambridge)

Dr Tatiana A. Bubba

Lecturer (Assistant Professor) in Applied Mathematics
Department of Mathematical Sciences
University of Bath
Claverton Down, Bath BA2 7AY, UK

Subject: Optimization techniques for Inverse Problems", Modena, September 4-6 2024

WORKSHOP: OPTIMIZATION TECHNIQUES FOR INVERSE PROBLEMS V (OIP2024)

Modena, Italy, September, 4-6, 2024

The workshop aims at strengthening the interaction between inverse problems and optimization, providing space for exchanges of information and ideas from the two areas. Both theoretical and applied aspects of optimization techniques will be faced, with particular attention to related developments in specific inverse problems as machine learning and signal and image restoration. The format of the fifth edition of the workshop is made up of a limited number of extended talks held by international experts in numerical optimization and inverse problems, and a poster session open to all the enrolled participants. A special session has been dedicated to the memory of Mario Bertero, who has brought invaluable contributions in these fields and in the previous editions of this event.

Speakers:

Alessandro Benfenati, Università di Milano
Federico Benvenuto, Università di Genova
Laure Blanc-Féraud, CNRS, Université Côte d'Azur, Inria Sophia Antipolis-Méditerranée
Tatiana A. Bubba, University of Bath
Luca Calatroni, CNRS, Université Côte d'Azur, Inria Sophia Antipolis-Méditerranée
Paola Causin, Università di Milano

Christine De Mol, Université libre de Bruxelles
Marco Donatelli, Università dell'Insubria
Matthias Ehrhardt, University of Bath
Erich Kobler, University Hospital Bonn
Natasa Krklec Jerinkic, University of Novi Sad
Greta Malaspina, Università di Firenze
Elena Morotti, Università di Bologna
Peter Ochs, University of Tübingen
Federica Porta, Università di Modena e Reggio Emilia
Antonio-José Silveti-Falls, CentraleSupélec, Paris
Tuomo Valkonen, University of Helsinki
Giuseppe Vicidomini, Istituto Italiano di Tecnologia
Silvia Villa, Università di Genova

All the information about the workshop can be found at the website
<https://sites.google.com/view/oip2024/home>

Subject: Jyväskylä Summer School in August 2024: Inverse problems

Two inverse problems courses are arranged as part of the Jyväskylä Summer School, Jyväskylä, Finland, 5-9 August, 2024:

- Ronny Ramlau (Johannes Kepler University, Linz): Integral Equations and Compact Operators
- Felix Lucka (Centrum Wiskunde & Informatica, Amsterdam): X-ray Computed Tomography
Inside Out: Physics, Mathematics, Imaging and Applications

The courses are aimed for MSc and PhD students, and also postdocs are welcomed. In addition to these courses, Jyväskylä Summer School offers a variety of other courses. All courses are free of charge.

The deadline for registration is April 30, 2024. For registration and more information, see: <http://www.jyu.fi/jss>. If you have any questions, feel free to contact summer school organization ([jss\(at\)jyu.fi](mailto:jss(at)jyu.fi)) or Joonas Ilmavirta ([joonas.ilmavirta\(at\)jyu.fi](mailto:joonas.ilmavirta(at)jyu.fi)). Feel free to spread the information!

Welcome to Jyväskylä!

Subject: Workshop on "Machine Learning in Infinite Dimensions" - 5-9 August 2024 - Bath, UK

Dear Colleagues,

We would like to draw your attention to the workshop "**Machine Learning in Infinite Dimensions**" held at the University of Bath, UK, from **5th to 9th of August 2024**. The workshop aims at bringing together researchers that work on different aspects of infinite-dimensionality in machine learning. Topics include, but are not restricted to, operator learning, Gaussian process regression, function spaces of neural networks, and measure transport.

Attendance is free but we ask all attendees to apply before **5th June 2024**. Support for travel and/or accommodation is available for (a limited number of) PhD students and early career researchers - please apply before 5th June 2024.

The workshop is generously supported by the International Centre for Mathematical Sciences (ICMS), Edinburgh, and the London Mathematical Society, as well as the EPSRC programme grant Maths4DL.

More details (including links to apply for attendance and travel/accommodation support) can be found on the workshop's webpage: <https://sites.google.com/view/machine-learning-workshop-bath>

Best wishes,

Tatiana Bubba, Bamdad Hosseini, Yury Korolev and Matthew Thorpe (organisers)

Subject: Optimization techniques for Inverse Problems", Modena, September 4-6 2024

Join INSA Lyon and CREATIS in pioneering the future of medical imaging!

We invite applications for a tenure track position in "Reconstruction and simulation for novel imaging modalities in nuclear medicine and radiology" within the Tomoradio group at [CREATIS](#), [INSA Lyon](#).

This role presents a rare opportunity to shape the landscape of medical imaging through innovative approaches in inverse problems, Monte Carlo simulation, tomography, and deep learning. The appointed candidate will drive impactful research with direct applications in cancer imaging and radiotherapy.

Candidates are required to have a doctorate, a distinguished scientific track record, and a proven ability to secure funding. They will mentor PhD candidates to excel in their academic pursuits. As part of our tenure track system, successful candidate will have the prospect of advancement to a full Professor position within five years, subject to meeting predetermined criteria.

Read more about the qualification requirements and tenure track criteria on the following pages:

Subject: IMA Conference on Inverse Problems from Theory to Application, Bath, 11-13 September 2024

We would like to draw your attention to the 4th IMA Conference on Inverse Problems from Theory to Application taking place at the University of Bath on 11-13 September 2024.

The aim of this conference is to bring together the applied mathematics, statistics, machine learning, engineering, physics and industrial communities around the topic of inverse problems to discuss recent developments and open challenges in theory, methodology, computational algorithms, and applications. We welcome industrial representatives, doctoral students, early career and established academics working in this field to attend.

Topics of interest include, for example,

- Inverse problems in mathematical and computational imaging.
- Inverse problems in science, medicine, engineering, and other fields.
- Model-based and data-driven methods for solving inverse
- Optimisation, statistical, and machine learning methods for solving inverse problems.
- Mathematical theory for inverse problems.
- Deterministic and stochastic computational methods and algorithms.

More details can be found on the conference web page <https://ima.org.uk/23503/4th-ima-conference-on-inverse-problems-from-theory-to-application/>

Date: Tuesday, 10 June, 2024

Subject: Invitation to participate in the Helsinki Speech Challenge 2024

Fellow researchers,

We are inviting you and your collaborators to participate in the Helsinki Speech Challenge 2024 (HSC2024). This unique challenge is designed to foster innovation in the fields of speech enhancement and inverse problems through the application of advanced deconvolution and machine learning techniques.

To express your interest or to get more details about the dataset and participation guidelines, please [visit our website](#).

About the Challenge:

HSC2024 offers an opportunity to work with a newly recorded dataset consisting of clean speech and corresponding recordings subjected to real-world disturbances, such as frequency attenuation and reverberation. The challenge is to develop methods that can effectively recover the clean audio from these corrupted recordings. Participants will be tasked with showcasing their ability to create innovative solutions that not only advance the state of the art but are also quantifiable; the success of these methods will be measured using a speech recognition model.

Why Participate?

- Engage with Real-World Data: The HSC2024 dataset provides a platform to tackle real-world audio challenges, as opposed to traditional synthesized datasets.
- Cross-Disciplinary Collaboration: This challenge bridges the gap between inverse problems, with roots in abstract and applied mathematics, and speech enhancement, which in recent years has relied heavily on machine learning.
- Prize: The winner of the challenge will receive the Ultimate Noise Device, a vintage white noise machine. Furthermore, they will be invited to present their work at Inverse Days, 10.-13. December 2024 in Oulu, Finland

We believe that your expertise and research focus align well with the goals of this challenge, and we would be thrilled to see your group contribute to this innovative endeavor.

How to Participate:

Please [visit our website](#).

The first important date is the sign-up deadline for the challenge, which is **1. September 2024**.

We look forward to your participation in making the Helsinki Speech Challenge 2024 a success.

Best regards,

HSC2024 Organisers

Subject: Five Doctoral Student Positions at LUT-University

Dear all,

We have 5 junior researcher (PhD student) positions in applied mathematics at LUT University in Finland. The positions are located in the cities of Lappeenranta and Lahti, and the first deadline for application is the end of this month, July 31st. The positions would ideally start between this fall and early 2025.

https://lut.rekryointi.com/paikat/index.php?jid=1127&key=&o=A_RJ&rspvt=hlll6u5mkmosogo84k0ss00scgg4sk0

The topics are in applied mathematics, machine learning and computational statistics. We have positions from the very applied to theoretical. A typical gross annual salary for these positions is around 32500€ and there are bonuses for publications. Please spread the word, and encourage people to apply and ask for more information. Contact details for the positions are in the link above but you can also email me.

Best regards and have a nice July!

Subject: Postdoc positions in foundations of AI, UK

Five three-year postdoc positions, one each at the Universities of Bristol, Edinburgh, Lancaster, Manchester and Warwick are now available to support the core research activities of the Prob AI (Probabilistic AI) Hub. The Prob AI Hub is an £8.5 million multi-institution initiative funded by the EPSRC to progress research on the Mathematical and Computational Foundations of AI.

We are looking to put together a team of postdocs with broad expertise spanning Bayesian statistics, computational statistics, inverse problems, numerical analysis, probability, statistical machine learning, stochastic analysis and uncertainty quantification. Information about the open positions and the specific expertise required at each location can be found here:

<https://www.probai.uk/pdra-positions>

Applications for all five posts should be made via the same online portal hosted by the University of Lancaster:

<https://hr-jobs.lancs.ac.uk/Vacancy.aspx?ref=0719-24>

The deadline for applications is 2nd September, with interviews anticipated to take place on 13th September.

Date: Wednesday, 14 August, 2024
Subject: Two postdoc positions at the university of Helsinki

Dear colleagues,

Due to unforeseen successes of researchers previously contracted to these positions, I have two postdoc positions available at the University of Helsinki, both to be filled ASAP. The focus of both positions can be adapted to both pure analysts and people with a more numerical focus.

1. The first, shorter one (roughly one year), involves online optimisation for dynamic process tomography. For a numerical focus, preferred skills include numerical PDEs and Julia programming, and, for a more theoretical focus, regularisation theory (inverse problems theory), or, even, geometric measure theory.
2. The second, longer one (funding available until July 2027) involves optimisation and inverse problems in spaces of measures. For a theoretical focus, knowledge of convex analysis and geometric measure theory are highly desirable. For a more numerical/applied focus, skills in numerical PDEs are required, and Rust programming skills or the capacity to learn are a huge advantage.

If a candidate's skills match both projects, other hiring combinations may also be possible.

If you know of possible candidates for these positions, please let them know. Enquiries and applications should be sent to tuomo.valkonen@helsinki.fi. Initially, a CV and a publication list is enough, although some candidates may be asked to provide references. Applications will be processed constantly.

Best regards,

Tuomo Valkonen

Date: Friday, 16 August, 2024
Subject: Postdoc position in analysis for inverse problems at Department of Mathematics, Aarhus University, Denmark

Dear all

Postdoc position open in analysis for inverse problems at Department of Mathematics, Aarhus University, Denmark.

Duration: 3 years

Start date: January 1st, 2025 (or soon after)

Deadline for applying: September 20th Danish time (the deadline must be respected for consideration)

Inverse problems and functional calculus of Neumann-to-Dirichlet maps

The project is on reconstruction in Calderón's inverse conductivity problem, with a specific focus on complex-valued coefficients and local boundary data. That is, based on a local Neumann-to-Dirichlet (ND) map on a subset of the domain boundary, to construct a coefficient for the PDE in the domain interior. The combination of complex coefficients and local data implies an open problem of high interest. The project will investigate transformations of such ND maps, and their properties, with the aim of satisfying certain nonlinearity estimates required for iterative methods to converge.

The work may also include short visits to Michael Vogelius at Rutgers, who will be one of the collaborators on the project.

For details on applying (must be done through the online system), salary, and additional details, see:

<https://math.au.dk/en/about/vacancies/job/postdoctoral-positions-in-mathematics-statistics>

The department is located on the main campus of Aarhus University and at walking distance to the city center of Aarhus, the second largest city of Denmark, located on the Jutland peninsula. The department has a flat hierarchy, friendly colleagues, and strong research environments. For more on the department, see the

website: <https://math.au.dk/en/>

Best regards

Henrik Garde

From: Melanie Moser, melanie.moser@uni-graz.at

Date: Friday, 23 August, 2024

Subject University assistant with doctorate, Graz, Austria

At the University of Graz, researchers and students work across a broad disciplinary spectrum to enlarge our knowledge, and find strategies to deal with challenges our society is confronted with and to shape tomorrow's world.

The University of Graz is a place which combines high quality academic research and teaching, where achievement is rewarded, careers are promoted, and social diversity is encouraged – all within a modern, award-winning working environment.

The Department of Mathematics and Scientific Computing is looking for a

University assistant with doctorate (m/f/d)

<https://jobs.uni-graz.at/en/jobs/133a4fcc-96f2-7db2-af05-65ef096097a1>

- Application deadline: 03.10.2024
- Salary Category: B1 with PhD
- Salary per Year: € 66.532,20
- Employment Start: As soon as possible
- Hours per week: 40.00 h/w
- Duration of Contract: Temporary employment
- Temporary Employment: 6 years

Your Responsibilities

- Research in the field of applied mathematics with emphasis on the analysis and the numerics of problems in mathematical imaging, inverse problems and data sciences
- Collaboration in interdisciplinary cooperation projects and third-party funded projects
- Independent teaching of courses in the field of applied mathematics, supervision of students and holding of examinations
- Participation in organizational and administrative matters

Your Profile

- Doctoral degree in a mathematical branch of study
- Solid knowledge of one of the following fields: mathematical methods, analysis and numerics in imaging, inverse problems or data sciences
- Ability for integration into the department's research profile and in particular into interdisciplinary cooperation projects

- Capacity for teamwork, organizational talent and ability to communicate
 - Very good command of english
 - Ability to teach in German (after a transition period of 2 years)
- We offer an annual gross salary of € 66,532.20 for a fulltime position.

Subject: 2nd annual Core Imaging Library User Meeting, Harwell, UK, Nov. 2024

Dear all,

We're extremely excited to announce the 2nd annual Core Imaging Library (CIL) User Meeting to be held on 4 – 7 Nov. 2024 at the Rutherford Appleton Laboratory in Harwell, UK.

Last year's event was great fun and the CIL team has worked hard to make this year even better. Reasons to attend:

- get hands-on CIL training – this year we have both introductory and advanced tracks
- hear about cool applications of CIL from users across a range of areas and facilities
- present your own CIL based work and exchange ideas with other users and developers
- influence future directions for CIL in townhall user community discussions
- and last but not least: participate in our Bring Your Own Data hackathon – a collaborative coding event to get your own data or problem set up in CIL with support from CIL developers – or work together to add cool new features to CIL and become an official contributor!

Whether experienced or new to CIL and whether working in X-ray CT or another imaging or computational area – do join us for this informal and fun event!

More information and registration at:

<https://ccpi.ac.uk/events/cil-user-meeting-2024/>

Feel free to reach out to me with any questions – and hope to see you there!

Best wishes, on behalf of the CIL team,
Jakob

Subject: SSVM 2025 open for submissions - Dartington Hall, Devon, UK, May 2025

Dear Colleagues,

The [10th International Conference on Scale Space and Variational Methods in Computer Vision \(SSVM2025\)](#) will take place from May 18 – May 22 2025, at [Dartington Hall, Totnes, Devon, UK](#).

Topics of interest include, but are not limited to: 3D vision, Approximation methods in imaging, Optimization methods in imaging, Differential geometry and invariants, Image- and feature analysis, Inverse problems in imaging, Machine learning in imaging, Compressed sensing, Manifold-valued data processing, PDEs in data processing, Scale-space methods, Surface and shape modelling and analysis, Segmentation, Registration, Restoration and reconstruction, Medical imaging and other applications.

Invited Speakers: Panagiota Birmpa (Heriot-Watt University, UK), Tom Pock (TU Graz, Austria), Jean Ponce (Ecole normale supérieure-PSL, France) and Tanja Tarvainen (University of Eastern Finland, Finland).

Submissions are now open through the [CMT system](#).

Submissions should be a maximum of 12 pages. All papers will undergo a double-blind peer-review procedure. Accepted papers will be presented at the conference either in the format of posters or talks and published in Springer's Lecture Notes in Computer Science series.

The conference will award a best student paper prize.

Submission of papers deadline: November 30, 2024.

Notification of acceptance: January 27, 2025.

Camera-ready papers: February 17, 2025.

For detailed information please see:

<https://sites.google.com/view/ssvm-2025/>

We hope to see many of you there! Feel free to distribute among your contacts.

Best wishes,

Tatiana Bubba

Subject: Dynamic X-ray CT data collection: Input welcome

Dear colleagues,

In a starting project on dynamic X-ray CT, we will collect and publish a big collection of 2D and 3D X-ray data that allows to evaluate and benchmark dynamic image reconstruction techniques (similar to what we did for 2D static CT: <https://www.nature.com/articles/s41597-023-02484-6>). The collection should include data from phantoms that allow to do “stop-motion”-style acquisitions (which has the advantage that for every time step, a full data set is available to compute a ground-truth reconstruction) as well as data from real dynamic objects (i.e., no static ground truth can be obtained). We will start with simple dynamics (e.g., affine transformations of simple objects) and work our way up to complex dynamics (e.g., elastic deformations, crack/crystal formation, fluid dynamics).

In order to design the experiments and to collect data that is as useful as possible for the imaging community, we welcome any input on which type of data you would find useful for your own work. Just drop me an email: Felix.Lucka@cwj.nl
