Subject: AIP 2025 Conference - 2nd Call for Minisymposium Proposals

The next AIP Conference will be held at FGV EMap, Rio de Janeiro, Brazil from July 28 to August 1, 2025.

For detailed information see <https://eventos.fgv.br/aip2025/>

We invite proposals for Mini symposia containing the following information:

- Title (up to 100 characters)
- Names and affiliations of organizers
- Brief description of the topic (about half a page)
- List of speakers including affiliations and links to webpages if available

A minisymposium may have either 4, 8 or 12 speakers, possibly including the organizers. Each talk is allocated 30 minutes, which includes time for discussion. Speakers should be contacted in advance. Please keep in mind that every participant may give at most two talks, preferably only one.

Minisymposium proposals should be submitted via email to aip2025@fgv.br with the subject line: Minisymposium Proposal

There is also an option to submit posters (a limited number of posters will be showcased during a single 90-minute poster section). Poster proposals (including title, abstract, name, affiliation and link to webpage) should be submitted via email to aip2025@fgv.br with the subject line: Poster Proposal

The submission deadline is January 31, 2025.

Contact: aip2025@fgv.br

From: Hok Shing Wong hsw43@bath.ac.uk

Date: Wednesday, 8 January, 2025

Subject: Inverse Problems and Deep Learning, University of Bath, UK, 7-9 July 2025

Dear all,

We are pleased to announce that we are now inviting submissions for short talks and posters for the Maths4DL conference on Inverse Problems and Deep Learning. The conference is taking place at the University of Bath, UK, from 7-9 July 2025.

Plenary speakers are:

- Youssef Marzouk, MIT AeroAstro
- Sebastian Neumayer, TU Chemnitz
- Ozan Öktem, KTH Royal Institute of Technology
- Audrey Repetti, Heriot Watt University
- Gabriele Steidl, Technische Universität Berlin
- Silvia Villa, Università degli Studi di Genova

You are invited to submit a proposal for a talk or poster that fits within the theme of the conference. Topics of interest are anything on the intersection of inverse problems and deep learning, such as learned regularisation schemes, generative priors, plug-and-play methods, unrolled networks and neural operators for solving PDEs. Additionally, we are interested in uncertainty quantification for such reconstruction methods, for instance via Bayesian methods. Applications include problems from medical and non-medical image and signal processing, physics and engineering.

Please visit our website to find out more about the conference and to access the submission form:

<https://maths4dl.ac.uk/newsevents/maths4dl-conference-on-inverse-problems-and-deep-learning>.

The deadline for contributions is **Friday 28 February 2025**.

Best wishes

Hok Shing

(on behalf of the Maths4DL Conference Team: Alexander Denker, Matthias Ehrhardt, Johannes Hertrich, Hok Shing Wong

Date: Monday, 20 January, 2025

Subject: Computational Techniques and Imaging Innovations in the Age of AI, UCL, 1-2 April 2025

We are pleased to announce the workshop on “Computational Techniques and Imaging Innovations in the Age of AI” held at UCL on 1-2 April 2025. The workshop aims to explore the intersection of inverse problems and machine learning, highlighting the critical interplay between classical approaches and modern AI techniques. Topics will include linear and non-linear imaging, Bayesian inversion, mathematics of deep learning, data assimilation, and generative models. This integration is crucial for developing fast, accurate, and reliable solutions to contemporary challenges in theory and applications.

This workshop also celebrates the 65th birthday of Prof. Simon Arridge, a leading figure in the international inverse problems community. His pioneering efforts in linking inverse problems with machine learning make this event a fitting tribute to his contributions and ongoing influence in the field.

Confirmed speakers are:

- [David Barber](#)
- [Teresa Correia](#)
- [Ben Cox](#)
- [Cosimo D'Andrea](#)
- [Marc Deisenroth](#)

- [Lior Horesh](#)
- [Bangti Jin](#)
- [Bill Lionheart](#)
- [Peter Maaß](#)
- [Ronny Ramlau](#)
- [Carola-Bibiane Schönlieb](#)
- [John Schotland](#)
- [Tanja Tarvainen](#)
- [Kris Thielemans](#)

While the workshop is free to attend, it is mandatory to register in advance to help us plan for the event. We invite early-career researchers to submit an abstract for a poster. Please visit <https://ctiai.github.io/> to find out more about the conference and registration.

Best wishes

Matthias

Subject: Post-doctoral and Ph.D. positions in Numerical Inverse Problems

Post-doctoral and Ph.D. positions in Numerical Inverse Problems.

The INCORWAVE project, funded by an ERC Starting Grant, invites applications for Postdoctoral and Ph.D. positions in computational inverse problems. These positions are part of the research team INRIA Makutu, at the University of Pau, located in the southwest of France.

Our project focuses on quantitative inverse methodologies in the context of passive imaging, with applications to helioseismology (solar imaging), and Earth seismology. The research encompasses both mathematical and numerical aspects of inversion. It includes convergence and stability analysis, which are essential for accurate reconstructions. In addition, the project aims to develop advanced quantitative imaging techniques for passive imaging. In particular for anisotropic media, where the multiple physical parameters of the mathematical model must be reconstructed. We are also investigating the integration of advanced regularization methods and data science approaches to enhance the performance of inversion algorithms.

Post-doctoral positions are two-years contracts renewable up to five years; Ph.D. positions are three-year contracts. Starting date is flexible.

More information at <https://ffaucher.gitlab.io/erc-incorwave/categories/position/>

To apply, please send your CV and cover letter to Florian Faucher at florian.faucher@inria.fr

Subject: Post-doc position at MaLGa, Genoa - imaging inverse problems, learning and optimization

Dear colleagues,

Applications are open for one post-doctoral position within the Computational Imaging and Learning (CIL) unit at the Machine Learning Genoa Center ([MaLGa](#)), Department of Computer Science.

Self-supervised learning for non-linear image reconstruction problems in fluorescence microscopy:

The project focuses on developing innovative reconstruction methods for partially unknown forward models with limited training data, with applications to fluorescence microscopy imaging. The work will be conducted in collaboration with the Italian Institute of Technology (IIT).

The position is funded by the ERC Starting Grant project MALIN.

Position Details:

- Start Date: May/June 2025 (flexible)
- Duration: 2 years (renewable)
- Location: Genova, Italy.

Interested candidates should apply by filling in the following [application form](#) before February 10, 2025.

For more details about the position and project, please contact Luca Calatroni (luca.calatroni@unige.it) directly.

All the best,
Luca Calatroni

Subject: Three-year postdoc position at the University of Graz

The University of Graz offers a

*** 3-year faculty position in the research group "Applied Mathematics and Machine Learning" ***

The research focus of this position is on mathematical foundations and interdisciplinary applications of machine learning and inverse problems.

Benefits of the position include:

- Close integration into a well-established, interdisciplinary collaborative network of several research groups in Graz working in the areas of inverse problems, machine learning, optimization and medical imaging
- High degree of autonomy; individual travel budget, possibility to conduct independent research, to apply for third-party funding, to teach courses, and to co-supervise PhD and Master students

- Part of an active research group (two PostDocs and three PhD students by the end of 2025) working on both mathematical foundations and concrete applications with interdisciplinary cooperation partners, e.g., from biomedical imaging or emergency care medicine

More details can be found at

<https://jobs.uni-graz.at/en/jobs/a0451eb9-518e-d9a7-f5b7-6756e9d72c44>

For more information, please contact Martin holler

Subject: Inverse Problems Symposium June 1-3, 2025 at Michigan State University

Inverse Problems Symposium 2025 registration and abstract submission are open!

The IPS 2025 is a continuation of 31 successful US and international symposia since 1991. The purpose of this conference is to bring together researchers and practitioners in inverse problems to exchange ideas, methods, and latest developments.

Early Registration (available until April 13th): \$375

Regular Registration (begins April 14th): \$425

Student Early Registration (available until April 13th): \$150

Student Regular Registration (begins April 14th): \$200

Sunday, June 1, is a tutorial on Machine Learning. Monday, June 2, will be oral presentations, Student Poster Competition, and evening banquet. Tuesday will be oral presentations finishing after lunch.

Date: Tuesday, 28 January 2025
Subject: Online training Core Imaging Library, March 2025

We're hosting 3 online training sessions, where you can dive into the Core Imaging Library (CIL) - a python package for tomographic imaging and other inverse problems. Sessions are hands-on using Jupyter notebooks and Python on our cloud platform, no installation needed.

Day 1 - 25 March, 13-17 GMT: Getting started with CIL
Day 2 - 26 March, 13-17 GMT: Iterative reconstruction with CIL
Day 3 - 27 March, 13-17 GMT: Advanced topics in CIL

This training is ideal for students and researchers working with CT data or inverse problems. Whether you're conducting research, building algorithms, or analysing imaging data, this is your chance to enhance your skills.

You're welcome to join one or all of the sessions, but if you're new to CIL or CT, we recommend kicking off with Day 1 to get familiar with the basics. If you have been to one of our CIL trainings before, Day 3 has some new notebooks and content to check out!

There are limited places available, so fill in the registration form as soon as possible!

More details and sign-up (free of charge but mandatory) at <https://ccpi.ac.uk/events/cil-online-training-march-2025/>

Post event (and in general) support is available on our Discord: <https://discord.gg/kmBcU2kebB>

Hope to see you there, and feel free to forward the invitation,

Jakob Sauer Jørgensen, DTU (jakj@dtu.dk)
- on behalf of the CIL team

Subject: 8 PhD and 7 Postdoc Positions in a New Special Research Area

Dear Colleagues,

In our new special research area (SFB) on "Mathematics of Reconstruction in Dynamical and Active Models", teams at the University of Graz, TU Graz, TU Vienna, and University of Klagenfurt are collaborating on a comprehensive, joint, interdisciplinary research effort to advance the mathematics of reconstruction for dynamical and active model, in particular in view of applications in magnetic resonance imaging (MRI).

Towards this aim, we will develop a comprehensive mathematical and computational framework for quantitative imaging, including physical modeling and optimization of the data acquisition process, identification of parameters, variational modeling, and generative machine learning methods; see <https://imsc.uni-graz.at/mr-dynamo>

for further details. As part of this research effort, we invite applications for in total 8 PhD and 7 PostDoc positions within our research area, see

<https://imsc.uni-graz.at/mr-dynamo/jobs>

To receive full consideration, applications should be submitted before March 21, 2025, but the call will remain open until all positions are filled.

Best regards,

Martin Holler on behalf of the SFB

Subject: Jyväskylä Summer school 2025

Dear colleague,

Greetings from the University of Jyväskylä!

The application period for the Jyväskylä Summer School is now open! ☀

Read more & apply not later than 30 April here: www.jyu.fi/jss

The 34th Jyväskylä Summer School will take place on **4-15 August 2025 at the University of Jyväskylä**.

One of the largest and oldest summer schools in Finland is organised by the Faculty of Mathematics and Science and the Faculty of Information Technology. Jyväskylä Summer School welcomes students from all over the world and offers a chance to take part in courses and get international experience.

This year's Summer School courses fall mostly under the themes of *Quantum Science and Probability Theory* and *Advanced Approaches for Secure and Intelligent Technologies*. Courses are offered in the following subjects:

- Chemistry
- Cognitive Science
- Computational Sciences
- Cyber Security
- **Inverse Problems**
- Mathematics
- Nanoscience
- Physics
- Biological and Environmental Sciences

All courses are taught in English by distinguished researchers from different parts of the world. **Participation in all Summer School courses is free of charge.**

Inverse Problems Symposium 2025 registration and abstract submission are open!

The IPS 2025 is a continuation of 31 successful US and international symposia since 1991. The purpose of this conference is to bring together researchers and practitioners in inverse problems to exchange ideas, methods, and latest developments.

Abstracts are due May 11, 2025.

Early Registration (available until May 4th): \$375

Regular Registration (begins April 14th): \$425

Student Early Registration (available until April 13th): \$150

Student Regular Registration (begins April 14th): \$200

Sunday, June 1, is a tutorial on Machine Learning. The keynote talk on Monday, June 2 will be on Autonomous Vehicles, followed by oral presentations, Student Poster Competition, and evening banquet. Tuesday will be oral presentations finishing after lunch.

Subject: News item for IPNet Digest from IOPP Inverse Problems journal

Editor-in-Chief Vacancy for *Inverse Problems*

[*Inverse Problems*](#), published by IOP Publishing, is currently seeking an enthusiastic and experienced Editor-in-Chief.

The Editor-in-Chief is the journal's scientific advisor, providing community insight and acting as a strong advocate for the journal in the community, with a view to increasing the status and visibility of the journal. The Editor-in-Chief works with the Institute of Physics Publishing journal team to set the vision for the journal and develop the journal to achieve agreed aims. They will provide leadership of the Editorial Board, collaborating to provide ideas for editorial initiatives and commissioning suggestions.

The deadline for applications is 27th April 2025. For more details and to apply please visit [Inverse Problems - IOPscience](#). For any queries, please email ip@ioppublishing.org

Subject: a new book: Carleman Estimates in Mean Field Games

Dear Colleagues,

This is to draw your attention to a recently published book:

Title: Carleman Estimates in Mean Field Games

Subtitle: Stability and Uniqueness for Nonlinear PDEs and Inverse Problems

Authors: Michael V. Klivanov and Jingzhi Li

Publisher: De Gruyter, 2025

<https://www.degruyter.com/document/isbn/9783111723198/html>

A truly attractive feature of the Mean Field Games Theory is that this theory can govern a wide variety of societal phenomena via a system of two coupled nonlinear parabolic Partial Differential Equations with opposite directions of time. Although a proper mathematical modeling is required for each such phenomenon. The price to pay, however, is a complicated structure of this system. Nevertheless, Carleman estimates can handle at least some difficult questions for this system, although far not all, of course.

Best regards, Michael V. Klivanov and Jingzhi Li

Subject: Announcement GIP Annual Meeting 2025

Upcoming event: GIP Annual Meeting

Date: 8 - 10 October 2025

Venue: Innovation Center, Saarland University Saarbruecken, Germany

Registration is now open for the GIP Annual Meeting at Saarland University Saarbruecken, Germany.

The workshops collect experts in inverse problems and related fields and has to be seen in a series of workshops starting in 2002 in Chemnitz (formerly known as Chemnitz Symposium on Inverse Problems).

Invited and confirmed speakers are:

- Leon Bungert (University of Wuerzburg)
- Lauri Oksanen (University of Helsinki)
- Björn Sprungk (TU Bergakademie Freiberg)
- Anne Wald (University of Goettingen)

Please register under www.uni-saarland.de/gip

Subject: Italian Inverse problems & Imaging meeting - I³, Genoa, January 19-21, 2026

Dear colleagues,

It is a pleasure to announce I³, the Italian Inverse problems & Imaging meeting. The first edition will be held at the University of Genoa on January 19-21, 2026.

I³ is the scientific meeting of the Italian community working on topics related to inverse problems and imaging. The meeting is based on voluntary contributions, in the form of talks or posters, by some of the participants, both senior and young researchers.

We encourage researchers at all levels working on inverse problems, imaging, and related topics to submit their interest in presenting their work during registration.

For further details, visit <https://sites.google.com/view/i3-meeting>.

Best wishes

The organising committee

Subject: Postdoc position, CT reconstruction algorithms, DTU, Denmark

A postdoc position on "Advanced Reconstruction Algorithms for Time-Resolved Nano CT of Sustainable Cement" is available at the Department of Applied Mathematics and Computer Science at the Technical University of Denmark (DTU).

<https://tinyurl.com/mathcrete>

Deadline: 15 June 2025

Would you like to put your mathematical and algorithm skills to work in a truly interdisciplinary project and be part of devising new sustainable cement formulations through improved dynamic X-ray imaging, then come to DTU and work with us!

We are seeking a full-time postdoctoral researcher to join DTU Compute as part of the Villum Synergy funded project "MathCrete". This research position will explore novel image reconstruction algorithms for improving the contrast and space+time resolution of dynamic in situ micro and nano CT (computed tomography).

The position offers the unique opportunity to collaborate closely with mathematical imaging researchers at DTU Compute, the DTU 3D Imaging Center and cement experts at DTU Construct, in particular

another MathCrete postdoc focused on developing new cement formulations and characterization techniques.

For algorithms and software there will also be the opportunity to work with the team behind the Core Imaging Library (CIL) and contribute to open-source reproducible research.

Feel free to reach out with questions and forward in your network.

Subject: 2 Fully Funded PhD Positions in Inverse Problems – University of Limerick

Dear Colleagues,
Applications are invited for **2 fully funded PhD positions** in the Department of Mathematics and Statistics at the **University of Limerick**, Ireland. These PhD scholarships are funded for **four years** with an annual stipend of **€25,000**, and **EU tuition fees covered** (for non-EU applicants, the EU portion of the fees will be covered). Additional funding is available for conference attendance, research travel, computing facilities, and related expenses. The successful candidates will work on the mathematical analysis and development of new reconstruction methods in anisotropic inverse problems. We are seeking motivated applicants with a strong background in analysis and a keen interest in computational inverse problems.

Both PhD students will be part of the Inverse Problems Group at the University of Limerick, the Mathematics Applications Consortium for Science and Industry (MACSI), a vibrant department hosting over 40 PhD students and 15 postdoctoral researchers, and the Centre for Research Training in Foundations of Data Science.

Application Process: to apply, please email the following documents to romina.gaburro@ul.ie: a **motivation letter**; **two reference letters**; copy of your undergraduate **transcripts** by the **15 July 2025**. The successful applicants will ideally start in October 2025.

For informal enquiries, please feel free to contact romina.gaburro@ul.ie.

We would be grateful if you could share this opportunity with potential candidates or relevant mailing lists.

Romina Gaburro

Subject: Seeking candidate for MSCA Postdoctoral Fellowship

Seeking candidate for MSCA Postdoctoral Fellowship

A highly qualified candidate with strong expertise in applied numerical mathematics inverse problems to apply for a two-year long Marie Curie fellowship (attractive salary over €100K per year plus family allowance and conference travel funding) is sought.

Requirements, as of the call deadline (10 September 2025):

- Hold a PhD in applied mathematics, with focus on inverse problems, with maximum 8 years of full-time equivalent research experience since obtaining the PhD
- Strong record of publication commensurable with the current career stage
- Open to any nationality but fluent in English
- Must not have resided or worked in United Kingdom for more than 12 months in the last 3 years

Application process (please email as soon as possible but no later than 20 August 2025 the supervisor at D.Lesnic@leeds.ac.uk):

- A cover letter explaining the motivation for applying and commitment of your availability to be in Leeds for 2 years (to commence between September 2026 to September 2027 for a period of 24 months) should the Marie Curie application be successful (deadline for application is 10 September 2025 with answer given around February 2026; also noting that most of the inverse problems application has already been written by the supervisor). It is very important that in case you wish to keep your present job/position at your institution you seek (formal or informal) approval from your manager that allows you unpaid study leave to Leeds in person for a period of 24 months. However, if you do not wish to keep your position or your current position is not permanent and ends in the next two years or do not hold a position, this approval is not necessary but your commitment should be clearly stated in your cover letter.
- Short CV (up to 2 pages), a list of your publications and contact details of two referees.
